EMMA High Definition Portable Audio Line Source Speaker

Atlas A-Line Acoustics is proud to introduce the release of the EMMA high definition audio line source speaker system. The EMMA (Every Man's Modular Array) system is designed to provide high-SPL coverage in venues designed for live performance or speech applications up to 80' x 200'. The EMMA system includes the EM806A-B 2-way line source with eight 6.5" ribbon high frequency drivers and eight 6.5" low frequency drivers capable of delivering up to 130dB across a 120° horizontal dispersion pattern. Also in the EMMA system is the EMW410A-B line source subwoofer featuring four 10" long excursion subwoofers in a sealed enclosure. Both include integrated amplification making them easy to connect to any source or mixer for fast set-up.

"The EMMA system is one of the most exciting products we are releasing this year", said Steve Young VP of Sales & Marketing for Atlas Sound. "Offering exceptional clarity and volume at amazing distances, this system is ideal for clubs, banquet halls, theaters and large houses of worship. Easy set up and tear down of the portable version make it easy to move when needed and it easily connects to existing AV sources without the need for excess cabling".

The EMMA system can be easily transported on the optional EMMA Transport System (ETS), which includes locking wheels and straps allowing for both the EM806A-B and EMW410A-B to be safely moved without risking damage to the equipment. The EMMA line array systems will be manufactured in Atlas' Monroe, WI fabrication facility using the highest quality materials to ensure longevity and durability over time.

See all of the new products from Atlas Sound and the Mitek Communications Group at the InfoComm Expo in Las Vegas, NV June 13th-15th, 2012 at booth C10608.
