Symetrix SymNet Delivers Dante, Studio-Quality Sound at South Korean Recording Complex

A single SymNet Radius 12x8 open architecture Dante-scalable device provides processing and routing between multiple studios in the highly-specified Seoul complex.

SEOUL, REPUBLIC OF KOREA — APRIL 2015: K-Pop is perhaps the most internationally well-known product of a South Korean music scene that has become increasingly diverse and dynamic during the last few decades. The South Korean Government has been keen to support the growth of their independent music industry, and in this spirit has recently co-sponsored a new recording and rehearsal facility geared towards up-and-coming acts that employs a Symetrix SymNet Radius 12x8 open architecture Dante-scalable DSP for audio processing and routing.

AV distributor and installer Sound Solution was enlisted to work on the project, which was completed during 2014. In addition to working on elements including the safety and communication systems, Sound Solution furnished Musistance (whose name is a compound created from 'Music' and 'Resistance') with core audio components and a Dante-based network infrastructure.

"Utilising Symetrix' superior support for the Dante media networking technology was a key solution for this project, as there was a need to transport audio across multiple spaces and process it centrally," explains Lisa Lee, marketing manager at Sound Solution. "A single SymNet Radius 12x8 DSP supports a Dante network that covers five individual private studios and a main general recording room. The result is that signals can be shared quickly and easily between the different spaces – affording maximum flexibility for the musicians, producers and engineers working there."

The formidable industry reputation of the Symetrix products and SymNet Radius 12x8's ability to adjust to future requirements through the use of SymNet xIn and SymNet xOut expanders helped inform the selection of DSP. Klark Teknik network bridges allow conversion between Dante and MADI realms, while Sound Solution also supplied beyerdynamic microphones, Denon pre-amplifiers and CD players, Midas consoles, RCF loudspeakers and Sommer cables.

"It's an extremely well-specified studio and the owners are very satisfied with the fact that this DSP allows clients to share their works in an efficient and stable manner," says Lee.

Located in a remodelled underground walkway beneath a six-lane boulevard in the Mapo District of Seoul, Musistance incorporates five private music studios, general recording spaces, two band practice rooms and more. In addition to music recording and rehearsal, Musistance is also regularly hired out for small-scale live performances and musical instrument lessons.

ABOUT SYMETRIX: Dedicated to making life sound better for almost 40 years.

With a current and broadly-based product portfolio that encompasses both open architecture (Edge, Radius 12x8 EX, Radius AEC, Solus) and fixed architecture (Jupiter, Zone Mix 761) solutions, Seattle, USA-based Symetrix is the global leader in digital audio signal processing. From a founding base in the studio and MI communities, Symetrix has emerged to take a defining role in commercial audio, its products now a default choice for large-scale installations in performance venues, sports arenas, educational establishments and many more. Benefiting from a worldwide

distribution network that has seen its products specified in over 100 countries, Symetrix nonetheless continues to spearhead the entire design and build process from its Seattle HQ. The manufacturer is now enhancing its readiness for a new era of AV networking through its licensing partnership with Audinate, whose world-leading Dante media networking solution is fully integrated into the SymNet DSP platform.
