About System 10 Digital Wireless

System 10 offers high-fidelity digital wireless for performing musicians and presenters. Operating in the 2.4 GHz range, far from TV and DTV interference, System 10 offers advanced 24-bit operation and amazingly clear sound. System 10 wireless ensures clear communications by providing three levels of diversity assurance: frequency, time, and space.

Frequency Diversity sends the signal on two dynamically allocated frequencies for interference-free communication. **Time Diversity** sends the signal in multiple time slots to maximize immunity to multipath interference. Finally, **Space Diversity** uses two antennas on each transmitter and receiver to maximize signal integrity.

Multiple system configurations are available, with handheld vocal microphone/transmitters and UniPak® body-pack transmitters designed for use with lavalier, headworn and instrument microphones as well as electric guitars.
