

Don't miss a single sound.

Business Technology Conference 2013

Session: Improve [Sound](#) in Your [Space](#)

Nearly one-fifth of U.S. adults have some degree of hearing loss. Technologies have been specifically designed to help people hear better across several different platforms, from enhancing phone communication to hearing a keynote in a public venue.

Improving sound within a facility can help improve productivity and increase test scores, but can also help with meeting necessary ADA compliance requirements.

In this presentation, you'll learn about assistive listening and sound reinforcement technology, and how they can make a difference in your facility. You'll also discover what happens if a venue isn't compliant with ADA requirements.

Presenter:
Cory Schaeffer, Co-Founder, Listen Technologies

Cory is co-founder and vp of sales worldwide for Listen Technologies. Founded in 1998, Listen manufactures wireless audio products used in auditory assistance, soundfield, tour group, language interpretation, and

conferencing applications. She is passionate about ensuring that people experience the wonders of sound in the venues they visit and enjoy most and that those with hearing loss are accommodated to have the same experience we all deserve.

In 2012, she was recognized as an NSCA Industry Movers & Shakers award winner, and as a finalist in 2012 and 2013 by the Women's Tech Council for the Women's Tech Awards. She just completed a four-year term on the InfoComm Board of Directors, and is now beginning a three-year term as vice president of the NSCA Education Foundation.
