

FSR's T6 FLEX Control Named Winner in 2013 WFX New Product Facility Awards

Woodland Park, NJ (October 8, 2013) – [FSR](#) is proud to announce that its [T6 FLEX control unit](#), ideally suited for churches with congregations of varying sizes, has been named “Most Innovative Green Product” in the 2013 WFX New Product Facility Awards. Winners were revealed earlier this month in Dallas during the Worship Facilities Conferences & Expo (WFX).

FSR's small, powerful, affordable T6 FLEX merges a simple touch screen control system with an elegant table box for fingertip room control. The fully-featured unit controls a full-range of AV equipment from an attractive, convenient housing making it perfect for classrooms, children's ministry areas and other rooms in worship facilities.

“FSR is honored that our T6 FLEX has received this prestigious WFX Award from *Worship Facilities Magazine*, *Worship Facilities Designer Magazine* and *Church Production Magazine*. FSR wanted to design a compact unit that would deliver outstanding performance and yet also meet the needs of facilities that may be facing budget constraints. We are truly pleased that the very community in which we designed this product has recognized our efforts,” explained Jan Sandri, FSR president.

Encased in an elegant and convenient housing at an appealing price point, the T6 FLEX allows Houses of Worship control over a variety of AV equipment, including projectors, displays and playback devices as well as screens and shades without the aid of an IR remote. It can serve larger installations as an auxiliary controller for the seamless switcher, the control point for remote pan / tilt / zoom cameras and much more. The system's vast number of features and its ability to control a full-range of AV gear also makes it ideal for classrooms, student, young adult and children's ministry areas, family viewing rooms and other AV equipped worship and meeting facilities.

The control system's touch screen is housed in the hinged top of a T6 Series table box. When closed, the T6 FLEX presents an elegant and stylish appearance and the control system is out of sight. When open, the touch screen is easily accessible as are the interior compartments that can be populated with a variety of AC, audio, video and data connector plates available from FSR.

Non-technical volunteers can operate the T6 FLEX's user-friendly touch screen with confidence and ease. Should they need assistance, AV personnel can remotely control the system using Flex Remote, a software application available for Windows®, Windows8®; Window RT®; Windows Phone®; Android® tablets and phone; iPad® and iPhone®.

The T6 FLEX installations throughout the campus can be centrally monitored using Flex Manager, a Windows based application that tracks the current status of each T6 FLEX and provides usage information, projector lamp life monitoring, remote control and advanced scheduling that saves energy by making sure that equipment is off when not in use.

The T6 FLEX features four serial ports, four IR ports (each able to control up to four devices), four GPIO ports, an IP port, built-in clock/calendar with scheduler, multi command scripting, conditionality and Power over Ethernet.

The 2013 [WFX Awards](#) are presented by *Worship Facilities Magazine*, *Worship Facilities Designer Magazine* and *Church Production Magazine* and are the leading annual national awards program recognizing innovative new facility products for the church market, church building design and management and innovative new technology products for the church market. WFX Award Winners were determined by *Church Production Magazine*, *Worship Facilities Magazine* and *Worship Facilities Designer Magazine* editors, distinguished members of the WFX Advisory Board, and WFX.

About FSR

FSR, established in 1981, manufactures a wide variety of products for the audio / video, education, hospitality, government, and religious markets, including AV floor, wall, table, and ceiling connectivity boxes, as well as a full line of interfaces, distribution amplifiers, matrix switchers, seamless switchers and CAT-5 solutions.

The company is an Energy Star Partner and complies with the American Recovery and Reinvestment Act of 2009 to demonstrate its deep commitment to preserving the planet.
