

Trinity AVL Chooses Community VERIS for Worship Spaces

Wellborn Baptist Church, Wellborn, FL with Community VERIS V2-32 and V2-28 Loudspeakers

Trinity AVL is an audio, video and lighting systems integrator based in Orange Park, Florida. Founded as a music store in Cleveland, Ohio in the 1930s, Trinity expanded to become a systems integrator in Western New York and relocated to Florida in 2005. As a regional integrator, Trinity primarily serves the worship facilities market but it also installs conference room AV and business security systems.

Trinity reaches worship facilities of all sizes but specializes in audio, video and lighting systems for small and mid-sized churches. Trinity's Lead Installer, Ronnie Polowy says these customers expect Trinity to design their systems and choose the right products to fill their needs. Recently, Trinity designed a new sound system for the Wellborn Baptist Church in Wellborn, Florida using Community VERIS V2-32 three-way models for left, center and right mains, V2-28 loudspeakers

Covenant Baptist Church, Valdosta, GA with Community VERIS V2-12 and V2-8 Loudspeakers

for left and right fill and V2-212S subwoofers for low-frequency support. Similarly, for the Covenant Baptist Church in Valdosta, GA, Trinity used VERIS V2-12 loudspeakers for left and right mains, V2-8 loudspeakers for delayed coverage and V2-28 loudspeakers for the balcony with low-frequency support provided by a pair of white V2-210S subs, discretely placed left and right on the platform.

Many of Trinity's worship facility customers have upgraded to digital audio mixers which can quickly switch scenes for contemporary or traditional services. Some have DANTE cards to split the microphones for digital recording or streaming broadcast. Trinity supplies DSP systems for house EQ, delay and loudspeaker management. Most of Trinity's church customers have multiple wireless microphones. Some have in-ear monitor systems but most also use stage monitor loudspeakers. Trinity also provides lighting and video systems for many of these church customers. Recently, they have begun to install LED lighting systems which provide substantial energy cost savings.

"For loudspeakers," Polowy said, "we've pretty much standardized on Community's VERIS family for these small to mid-sized churches. Overall, we haven't found any other loudspeaker line in this price range that even comes close to VERIS for its combination of performance and versatility."
