

Kramer USA
Introducing K-Lock

***The Ultimate Pull Resistant Connector
on Kramer's HDMI Cables***

Everyone in the Pro AV industry is familiar with the challenges arising while using HDMI cables, even in the simplest installation. The tendency of lower gauge (thicker) cables to weigh down the cable connector and pull it out of the socket has a substantial impact on the final result. Even the slightest tension can result in signal loss, and when it comes to longer distances, the chances for signal loss are even higher.

To make your installation a success, Kramer Electronics presents K-Lock; our pull resistant connector that provides up to 15lbs (6.8kg) of retaining force. K-Lock is equipped with small springs on the surface of the connector that hold the cable tightly in place.

For more information on K-Lock, [download](#) the flyer now!
