This new universal scaler series encompasses all of the features of the previous generation of scalers, but with more input/output flexibility. They also sport new, ergonomically designed control panels and highly intuitive configuration management tools making installation efficient for integrators and operation simple for users, all while maintaining the same price point as the previous generation of scalers.

The C2-2X55 series provides the ultimate flexibility to the user, as the C2-2855 features the ability to up/down/cross convert, the C2-2755 to up/cross convert, and the C2-2655 to down convert, so the user may now purchase what they want, depending on their needs.

They enable extremely flexible audio embedding and de-embedding for both HDMI and 3G/HD/SDI inputs and outputs. Add to that Integral Stereo Audio 4x1 audio routing switcher with four unbalanced inputs that can follow the video input selection. A rear panel terminal block and a 3.5mm jack-socket provides access.

High quality bi-directional conversion between a variety of analog and digital video formats is
provided. Inputs and outputs can be SD/HD/3G-SDI, HDMI, DVI, Composite Video, YC, YUV, YPbPr or RGB. An included key feature allows an image to be keyed over another and faded in and out due to the 4:4:4 sampling format for RGB sources, precise keying at the pixel level can be achieved. Five full-frame still images can be stored and switched along with five logos.

TvONE appreciates and values our business relationship and looks forward to your continued interest in our products. While we regret any inconvenience this announcement may cause, we are eager to supply your future product requirements with our world-class quality product lines.
