### NEW CORIOcontrol SOFTWARE UPGRADES NOW AVAILABLE

tvONE enhances the new C2-2000 Series products with some hot new features. Now you can take advantage of our new capabilities in your system design and integration.

#### New Control Software release for the C2-2855, C2-2755 & C2-2655

Newly released, the C2-2000 series encompasses the C2-2855 Universal Scaler, the C2-2755 Video Scaler and the C2-2655 Scan Converter. This new series provides the ultimate flexibility to the user, as the C2-2855 features the ability to up/down/cross convert, the C2-2755 to up/cross convert, and the C2-2655 to down convert, so the user may now purchase what they want, depending on their needs.

Adding even more flexibility, the new C2-2000 series CORIOcontrol software (release 1.2.7.0) adds export and import Unit configurations that contains data for Unit settings, EDID's, Presets, Stills, Logos, and custom resolutions, so transferring your units configuration to multiple devices for large deployments is easier than ever! Several bug fixes have been addressed and corrected in this update, as well as the addition of Alpha Channel support to Logos and Stills allowing for even cleaner transitions.
