

Electro-Voice introduces new extended-length “L” versions of its 635 and RE50 field production microphones

April 13, 2015

- ▶ Industry-standard interview mics now available in 9.5” versions
- ▶ Extended reach keeps reporter’s hand out of shots when interviewing
- ▶ Same great sound as the original 635 and RE50 models

Las Vegas, NV, April 13, 2015 Electro-Voice is pleased to announce new extended-length (“L”) versions of its classic 635 and RE50 dynamic microphones for field production: **635L** (beige finish), **635L/B** (black finish), **RE50L** (black finish), and **RE50N/D-L** (black finish, neodymium capsule).

Each with an overall length of 9.5”, the new “L” versions offer the same legendary performance and durability that have made the original 635 and RE50 models among the broadcast industry’s most trusted—and most recognizable—tools of the trade for decades.

Interviewing styles vary, as do the individual preferences of reporters and producers, with many preferring a microphone with a longer handle in order to keep the reporter’s hand out of the shot. These new versions are designed specifically for broadcast professionals who prefer that additional reach; the robust design, internal shock protection and pop filters, omnidirectional polar patterns and linear frequency response that give the regular-length 635 and RE50 models their unique combination of sound quality and rugged reliability all remain intact.
