

## CCS 1000 D Digital Discussion System from Bosch New, versatile, user-friendly digital conference system with excellent audio quality

June 17, 2015  
PI 8668 ST Goe

- ▶ Compact digital conference system for small to medium-sized meeting areas
- ▶ Plug-and-play functionality for easy set-up and use, with built-in recording to internal or removable media
- ▶ Excellent speech intelligibility with digital language processing and built-in Digital Acoustic Feedback Suppression (DAFS)

**InfoComm 2015, Orlando, FL:** Bosch is pleased to announce the launch of the CCS 1000 D Digital Discussion System – its latest innovation in conference technology. Compact yet versatile, it brings user-friendliness and meeting productivity to a new level. The highly flexible system can connect up to 80 discussion devices, making it ideal for small to medium-sized meeting areas – including town halls, local business centers and courtrooms – as well as for mobile installations used by rental companies.

Thanks to its advanced digital audio processing, superior microphone and loudspeaker performance, the CCS 1000 D Digital Discussion System offers excellent speech intelligibility. Easy web browser configuration and features such as built-in internal and/or USB recording add further user-friendly functionality to the system. The system's modern design was recently recognized with the prestigious iF Design Award.

### **Key features:**

Additionally to superior microphone and loudspeaker performance, the CCS 1000 D Digital Discussion System offers excellent speech intelligibility with advanced digital audio processing – including Digital Acoustic Feedback Suppression (DAFS) for clear speech. This technology is specifically developed by Bosch and directly integrated into the system, which is unique for this product segment. It enables simultaneous microphone and loudspeaker activity in each discussion device without acoustic feedback. Excellent speech intelligibility creates a natural, face-to-face meeting experience and ensures participants stay alert during the meeting.

Record with confidence: The CCS 1000 D controller is able to digitally record and playback more than 4,000 hours of discussion with one 128GB USB stick and up to eight hours via the built-in internal memory. Clear indicators ensure easy set-up and control.

The CCS 1000 D Digital Discussion System features an integrated web browser for advanced configuration – including microphone control for the chairperson, recording and playback. All functions can be easily accessed using common web browsers.

In more advanced set-ups, on-board support for the automatic Bosch High Definition Conference Dome camera using web interface allows easy and quick configuration and operation.

The automatic energy saving mode switches the system off after two hours of inactivity. In addition to saving energy, this reduces costs and prolongs the system's lifetime.

The CCS 1000 D Digital Discussion System allows future expandability with public address or language distribution systems to further enhance and extend the meeting experience.

The CCS 1000 D Digital Discussion System is available worldwide with immediate effect.
