# Announcing “Video Scoreboard”

*A 21<sup>st</sup> Century Scorekeeping System Capable of High-definition, Full-Motion Video*

Video Scoreboard™

**Mount Vernon, WA** – Dimensional Communications new Video Scoreboard is the first system of its kind to offer the benefits of a large-scale video display, application-based score and time keeping, and live video production in an affordable package perfectly suited to venues from elementary level through high-school and college indoor sports, small- to mid-sized commercial arenas and other facilities. Available in three standard sizes or custom configurations, Video Scoreboard is an easy-to-install and maintain modular system.

Venue staff can quickly set up Video Scoreboard for basketball, volleyball, and wrestling or other sports and score / time keepers can operate the system from simple to navigate wireless touch-screen controllers. With its full-motion, full-color, ultra-hi luminosity video capability, Video Scoreboard can quickly switch from scorekeeping to live-action cameras, still images, pre-produced videos or paid advertising from local or national sponsors, via simple single button pushes.

Video Scoreboard is offered in two easily expandable system configurations. The basic system provides a full-motion full-color LED display screen and multi-sport scorekeeping applications with a simple selector to ingest 3<sup>rd</sup> party content onto the screen. Video Scoreboard Pro™ adds a complete 4K capable live video production system for presenting multiple AV content sources during events along with shot clocks and whistle integrations used by professional sports franchises, making the system a versatile teaching tool for assemblies, sports instruction or video production classes. With its ultra-bright, high-definition screens, Video Scoreboard can replace delicate and expensive projectors and screens in most venues. Designed, built and tested for proven long-term reliability and efficient power usage, Video Scoreboard can operate continuously, doubling as a digital signage display and visual communications solution.

Experience the Video Scoreboard™ in booth #979 at Infocomm, Orlando, 17-19 June, 2015 or visit [www.videoscoreboard.net](http://www.videoscoreboard.net) for more information.
