Biamp Systems Introduces New Power Audio Amplifier

New amplifier expands the power of TesiraFORTÉ®

BEAVERTON, Oregon — Nov. 1, 2016 — [Biamp Systems,](#) a leading provider of innovative, networked media systems, today announced its new four-channel power amplifier, the AMP-A460H. Created to address the sound needs of small- to medium-sized conference and meeting spaces, the new amplifier allows integrators to customize the amplification in rooms using Biamp Systems' TesiraFORTÉ® audio processing platform.

"Many conference rooms need simple, reliable audio amplification," said Shell Haffner, director of product management at Biamp Systems. "Our new AMP-A460H is a perfect match for conference rooms operating on the TesiraFORTÉ platform. Now integrators can choose Biamp quality for powering speakers in meeting spaces of varying sizes."

The AMP-A460H analog amplifier features four channels of audio output — 60 watts per channel at 8 ohms. Bridged in pairs, it can provide 120 watts at 8 ohm or 120 watts with constant voltage (70V/100V) direct drive. With a compact half-rack design, it includes a mounting kit to fit easily into any standard rack. It also features a balanced analog line in, allowing easy and simple integration with any of the eight TesiraFORTÉ models. Extending energy conservation and reducing costs, the amplifier automatically powers down after 25 minutes with no audio signal. With fan-less operation and simple, software-free installation, the AMP-A460H is ready to be placed in any conferencing, telephony, or VoIP environment needing minimal sound distribution.

The AMP-A460H will begin shipping this month and is backed by Biamp's five-year warranty. More information on Biamp's full line of products is available at www.biamp.com.
