

DOES MORE. WEIGHS LESS.

Introducing the ELX200 portable loudspeaker series from Electro-Voice with remote system control

- ▶ New series designed to deliver superior Electro-Voice sound quality and best-in-class features in a super-portable format
- ▶ Next-generation enclosures offer a step up in both styling and strengthened build quality – perfect for working musicians and DJs
- ▶ Integrated Quick**Smart**DSP engine offers precision system control, including quick and easy Bluetooth®* wireless configuration and monitoring via the new Quick**Smart**Mobile application

The ELX200 series is the latest member of the Electro-Voice portable loudspeaker family and the next generation of the popular ELX line. Designed to deliver superior Electro-Voice sound quality and best-in-class features in a super-portable format, the lineup includes 10-inch, 12-inch and 15-inch two-way models as well as 12-inch and 18-inch subwoofers. Powered and passive versions are available.

All aspects of each ELX200 model from Electro-Voice work together seamlessly to deliver heavyweight performance in a lightweight package. Integrated efficient Class-D power amplifiers provide distortion-free maximum sound pressure levels utilizing high-sensitivity transducers – all designed and engineered by Electro-Voice. System reliability is verified via rigorous endurance testing of the custom internal components, amplifier/DSP module, and enclosures and hardware – all undertaken above and beyond industry norms.

Full-range ELX200 models feature low-profile form factors designed with durable composite enclosures to balance light weight, structural integrity, and ease of use. EV's proven three-handle design allows for easy lifting and pole-mounting for mobile applications; suspension points make fixed installation simple and secure. ELX200 subwoofers pack powerful low-frequency output into a compact

footprint, assembled in optimized wood enclosures with a protective polyurea finish.

The ELX200's user-friendly versatility is further enhanced with the new Bluetooth®* Quick**Smart**Mobile app, which allows the wireless configuration, control, and monitoring of up to six ELX200 systems simultaneously. The app makes it quick and easy to dial-in settings in real time from in front of the system, ensuring exceptional EV audio performance at all times for every application.

Additional EV-signature features include SST (Signal Synchronized Transducers) waveguide design, which combines a more compact footprint with exceptionally precise and consistent coverage, and Quick**Smart**DSP, providing easy system setup via an intuitive single-knob user interface with liquid crystal display.

**Bluetooth® is available in select countries. The Bluetooth® word mark and logos are registered trademarks owned by Bluetooth SIG, Inc. and any use of such marks by Bosch Security Systems, Inc. is under license. Other trademarks and trade names are those of their respective owners.*
