STEALTH ACOUSTICS TO OFFER AUDIOCONTROL AMPLIFIERS THROUGH US DEALER NETWORK

Embargoed for release until 12PM of Thursday September 6, 2018. San Diego, CA

Award-winning invisible speaker builder, Stealth Acoustics, has announced an agreement to provide AudioControl amplifiers to US authorized Stealth Acoustics dealers. Stealth will now include AudioControl Director Series, Bijou and Rialto amplifiers as part of its offering, allowing domestic Stealth dealers to place AudioControl amplifier orders and achieve complete high-quality audio setups through Stealth.

AudioControl combines flexible and reliable amplification design architecture and DSP features with US manufacturing to create premium, multi-channel solutions that have secured a strong reputation for product quality with custom integrators.

Stealth Acoustics, the only multiple award winner in the invisible and environmental speaker arena, builds its speakers in the USA utilizing patented technologies unavailable to other invisible or outdoor speaker providers. This delivers unparalleled performance from completely invisible speaker systems. By matching Stealth speakers with appropriately configured AudioControl amplifiers, system performance can be demonstrably improved.

“This partnership creates a simple yet synergistic way for our dealers to purchase high-performance amplifiers and speakers, leading to better system outcomes and increased market opportunity,” said Steve Olszewski, Vice President of Stealth Acoustics. “We are confident that when Stealth dealers use a premium amplifier from AudioControl with our speakers, they will get the best possible results.”

Chris Kane of AudioControl agrees: “We have been strategically engaging with quality speaker manufacturers through our ‘Sound Partner Program’ incorporating DSP-based speaker profiles directly into our Director Series multi-channel amplifiers. Integrators can easily select the appropriate profile in the amplifier to access Stealth Acoustics models, making optimal tuning a simple task.”
