

Jobsite Management Training On-Line Course (Instructor- Led)

The installation phase of a typical project presents the highest risk for Systems Integrators. In the current climate with restrictions due to PPE and COVID OSHA requirements, field work is even more critical for profitable projects.

Most integrators lose more than 10% margin points at the project completion due to labor cost overrun and/or missed change orders.

*This course is designed to help **Lead Installers and Field Managers** to effectively manage the installation phase of projects, avoid scope creep and capture every opportunity for Change Orders.*

This course also offers a foundation to prepare individuals for a career in project management.

Learning Objectives:

- *Overview of Frontline Project Management principles and best practices*
- *Review of the basic project financials terms*
- *Provide a guide on how to effectively manage the field team, subcontractors and other trades*
- *Provide tools and processes on how to manage the project scope creep and field changes*
- *Establish guidelines and etiquettes on what to do and say on the jobsite*

Audience: *Project Leads, Installers, Technicians and the Project Field Team.*

Duration: *Two Hours of Self-Study Prerequisite Work and Five Hours of Instructor-Led On-Line Sessions.*

Upcoming Sessions Schedule:

Check NSCA website for available session dates.

Format: *Self-Study and Instructor-Led On-Line*
